Overview

- Introduction
- Numerical modeling of black holes
- Applications
 - Gravitational wave physics
 - Astrophysics
 - High-energy physics
 - AdS/CFT correspondence
 - Fundamental and mathematical studies
- Conclusions and outlook

The Schwarzschild solution

• Einstein 1915

General relativity: geometric theory of gravity

Schwarzschild 1916

 $ds^{2} = -(1 - \frac{2M}{r}) dt^{2} + (1 - \frac{2M}{r})^{-1} dr^{2} + r^{2}(d\theta^{2} + \sin^{2}\theta d\phi^{2})$

- Singularities:
 - r = 0: physical
 - r = 2M: coordinate
- Newtonian escape velocity

$$v = \sqrt{\frac{2M}{r}}$$

Evidence for astrophysical black holes

- X-ray binaries
 e. g. Cygnus X-1 (1964)
 MS star + compact star
 ⇒ Stellar Mass BHs
 ~ 5...50 M_☉
- Stellar dynamics near galactic centers, iron emission line profiles
 ⇒ Supermassive BHs
 ~ 10⁶ ... 10⁹ M_☉
 AGN engines

U. Sperhake (DAMTP, University of Cambr Black-hole simulations on supercomputers

Conjectured BHs

- Intermediate mass BHs $\sim 10^2 \dots 10^5 \ M_{\odot}$
- Primordial BHs
 - $\leq M_{Earth}$
- Mini BHs, LHC ~ *TeV*

Note: BH solution is scale invariant!

U. Sperhake (DAMTP, University of Cambr Black-hole simulations on supercomputers

How to get the metric?

Train cemetery Uyuni, Bolivia

(日)

• Solve for the metric $g_{\alpha\beta}$

07/11/2012 9 / 50

How to get the metric?

- The metric must obey the Einstein Equations
- Ricci-Tensor, Einstein Tensor, Matter Tensor

 $egin{aligned} & {\cal R}^{\mu}{}_{lpha\mueta} \ & {\cal G}_{lphaeta} \equiv {\cal R}_{lphaeta} - rac{1}{2} g_{lphaeta} {\cal R}^{\mu}{}_{\mu} & ext{"Trace reversed" Ricci} \ & {\cal T}_{lphaeta} & ext{"Matter"} \end{aligned}$

• Einstein Equations $G_{\alpha\beta} = 8\pi T_{\alpha\beta}$

Solutions: Easy!

- up up
 - Take metric
 - \Rightarrow Calculate $G_{\alpha\beta}$
 - \Rightarrow Use that as matter tensor

• Physically meaningful solutions: Difficult!

The Einstein Equations in vacuum

- "Spacetime tells matter how to move, matter tells spacetime how to curve"
- Field equations in vacuum: $R_{\alpha\beta} = 0$ Second order PDEs for the metric components Invariant under coordinate (gauge) transformations
- System of equations extremely complex: Pile of paper! Analytic solutions: Minkowski, Schwarzschild, Kerr, Robertson-Walker, ...
- Numerical methods necessary for general scenarios!!!

A list of tasks

- Target: Predict time evolution of BBH in GR
- Einstein equations: 1) Cast as evolution system

2) Choose specific formulation

3) Discretize for computer

- Choose coordinate conditions: Gauge
- Fix technical aspects: 1) Mesh refinement / spectral domains

2) Singularity handling / excision

3) Parallelization

- Construct realistic initial data
- Start evolution and waaaaiiiiit...
- Extract physics from the data

07/11/2012 19 / 50

・ロト ・ 同 ト ・ ヨ ト ・ ヨ ト … ヨ

Galaxies host SMBHs

- Galaxies ubiquitously harbor BHs
- BH properties correlated with bulge properties
 - e. g. J.Magorrian et al., AJ 115, 2285 (1998)

SMBH formation

- Most widely accepted scenario for galaxy formation: hierarchical growth; "bottom-up"
- Galaxies undergo frequent mergers \Rightarrow BH merger

U. Sperhake (DAMTP, University of Cambr Black-hole simulations on supercomputers

07/11/2012 21 / 50

Gravitational recoil

- Anisotropic GW emission ⇒ recoil of remnant BH Bonnor & Rotenburg '61, Peres '62, Bekenstein '73
- Escape velocities: Globular clusters 30 km/s
 dSph 20 100 km/s
 dE 100 300 km/s
 Giant galaxies ~ 1000 km/s

Ejection / displacement of BH \Rightarrow

- Growth history of SMBHs
- BH populations, IMBHs
- Structure of galaxies

U. Sperhake (DAMTP, University of Cambr Black-hole simulations on supercomputers

Kicks from non-spinning BHs

• Max. kick: ~ 180 km/s, harmless!

González et al., PRL 98, 091101 (2009)

07/11/2012 23 / 50

< 口 > < 同 >

Spinning BHs: Superkicks

Kidder '95, UTB-RIT '07: maximum kick expected for

• Kicks up to $v_{max} \approx 4\,000 \text{ km/s}$

González et al. '07, Campanelli et al. '07

- "Hang-up kicks" of up to 5000 km/s
 Lousto & Zlochower '12
- Suppression via spin alignment and Resonance effects in inspiral Schnittman '04, Bogdanovicź et al. '07, Kesden, US & Berti '10, '10a, '12

Dependence on mass ratio?

U. Spechake (DAMTP, University of Cambr Black-hole simulations on supercomputers

Double jets and spin flips

- BH binary with plasma
- Jets driven by L
- Optical signature: double jets

Palenzuela, Lehner & Liebling '10

- Spin re-alignment
 - \Rightarrow new + old jet
 - \Rightarrow X-shaped radio sources

Campanelli et al. '06

• Extra dimension with warp factor Randall & Sundrum '99

Stages of BH formation

Black Holes on Demand

Scientists are exploring the possibility of producing miniature black holes on demand by smashing particles together. Their plans hinge on the theory that the universe contains more than the three dimensions of everyday life. Here's the idea:

As the particles approach in a particle accelerator, their gravitational attraction increases steadily. When the particles are extremely close, they may enter space with more dimensions, shown above as a cube. The extra dimensions would allow gravity to increase more rapidly so a black hole can form.

Such a black hole would immediately evaporate, sending out a unique pattern of radiation.

Matter does not matter at energies well above the Planck scale
 Model particle collisions by black-hole collisions
 Banks & Fischler '99; Giddings & Thomas '01

Does matter "matter"?

- Hoop conjecture ⇒ kinetic energy triggers BH formation
- Einstein plus minimally coupled, massive, complex scalar filed "Boson stars" Pretorius & Choptuik '09

- BH formation threshold: $\gamma_{thr} = 2.9 \pm 10$ % $\sim 1/3 \gamma_{hoop}$
- Model particle collisions by BH collisions

U. Spechake (DAMTP, University of Cambr Black-hole simulations on supercomputers

Does matter "matter"?

- Perfect fluid "stars" model
- $\gamma = 8...12$; BH formation below Hoop prediction East & Pretorius '12
- Gravitational focussing \Rightarrow Formation of individual horizons

- Type-I critical behaviour
- Extrapolation by 60 orders would imply no BH formation at LHC
 Rezzolla & Tanaki '12
 Control & Control Black-hole simulations on supercomputers

BH Head-on collision: D = 4, b = 0, $\vec{S} = 0$

• Total radiated energy: 14 ± 3 % for $v \rightarrow 1$ US *et al.* '08

About half of Penrose '74

Agreement with approximative methods

Flat spectrum, multipolar GW structure

Berti et al. '10

U. Spechake (DAMTP, University of Cambr Black-hole simulations on supercomputers

BH Grazing collisions: D = 4, $b \neq 0$, $\gamma = 1.52$

- Zoom-whirl orbits Pretorius & Khurana '07
- Immediate vs. Delayed vs. No merger

US, Cardoso, Pretorius, Berti, Hinderer & Yunes '09

U. Sperhake (DAMTP, University of Cambr Black-hole simulations on supercomputers

Gravitational radiation: Delayed merger

U. Sperhake (DAMTP, University of Cambr Black-hole simulations on supercomputers

07/11/2012 22 / 50

Scattering threshold b_{scat} in D = 4

- $b < b_{scat} \Rightarrow Merger$
 - $b > b_{scat} \Rightarrow Scattering$
- Numerical study: $b_{\text{scat}} = \frac{2.5 \pm 0.05}{v} M$ Shibata. Okawa & Yamamoto '08

Independent study by US, Pretorius, Cardoso, Berti et al. '09, '12

 $\gamma = 1.23 \dots 2.93$:

 $\chi = -0.6, 0, +0.6$ (anti-aligned, nonspinning, aligned)

Limit from Penrose construction: b_{crit} = 1.685 M
 Yoshino & Rychkov '05

Large N and holography

Holography

- BH entropy $\propto A_{Hor}$
- For a Local Field Theory entropy $\propto V$
- Gravity in *D* dims
 ⇔ local FT in *D* − 1 dims

• Large N limit

- Perturbative expansion of gauge theory in g^2N
 - \sim loop expansion in string theory
- N: # of "colors"
 - g^2N : t'Hooft coupling

The AdS/CFT conjecture

Maldacena '98

• "strong form": Type IIb string theory on $AdS_5 \times S^5$ $\Leftrightarrow \mathcal{N} = 4$ super Yang-Mills in D = 4

Hard to prove; non-perturbative Type IIb String Theory?

- weak form": low-energy limit of string-theory side
 ⇒ Type IIb Supergravity on AdS₅ × S⁵
- Some assumptions, factor out S⁵
 - \Rightarrow General Relativity on AdS_5
- Corresponds to limit of large N, g²N in the field theory
- E. g. Stationary AdS BH ⇔ Thermal Equil. with T_{Haw} in dual FT
 Witten '98

Collision of planar shockwaves in $\mathcal{N} = 4$ SYM

- Dual to colliding gravitational shock waves in AADS
- Characteristic study with translational invariance
 Chesler & Yaffe '10, '11
- Initial data: 2 superposed shockwaves

 $ds^{2} = r^{2}[-dx_{+}dx_{-} + d\mathbf{x}_{\perp}] + \frac{1}{r^{2}}[dr^{2} + h(x_{\pm})dx_{\pm}^{2}]$

Collision of planar shockwaves in $\mathcal{N} = 4$ SYM

- Initially system far from equilibrium
- Isotropization after $\Delta v \sim 4/\mu \sim 0.35 \ fm/c$
- Confirms hydrodynamic simulations of QGP \sim 1 $\mathit{fm/c}$ Heinz '04

• Non-linear vs. linear Einstein Eqs. agree within \sim 20 % Heller et al. '12

U. Spechake (DAMTP, University of Cambr Black-hole simulations on supercomputers

Fundamental properties of BHs

U. Sperhake (DAMTP, University of Cambr Black-hole simulations on supercomputers

07/11/2012 42 / 50

Stability of AdS

- m = 0 scalar field in as. flat spacetimes Choptuik '93 $p > p^* \Rightarrow BH$, $p < p^* \Rightarrow flat$
- m = 0 scalar field in as. AdS Bizon & Rostworowski '11

• Similar behaviour for "Geons"

Dias, Horowitz & Santos '11

U. Spechake (DAMTP, University of Cambr Black-hole simulations on supercomputers

Stability of AdS

Pulses narrow under successive reflections

Buchel, Lehner & Liebling '12

07/11/2012 44 / 50

Bar mode instability of Myers-Perry BH

- MP BHs (with single ang.mom.) should be unstable.
- Linearized analysis Dias et al. '09

Non-linear analysis of MP instability

Shibata & Yoshino '10

- Myers-Perry metric; transformed to Puncture like coordinate
- Add small bar-mode perturbation
- Deformation $\eta := \frac{2\sqrt{(l_0 l_{\pi/2})^2 + (l_{\pi/4} l_{3\pi/4})^2}}{l_0 + l_{\pi/2}}$

07/11/2012 46 / 50

Cosmic Censorship in D = 5

Pretorius & Lehner '10

- Axisymmetric code
- Evolution of black string...
- Gregory-Laflamme instability cascades down in finite time
 - until string has zero width
 - \Rightarrow naked singularity

Cosmic Censorship in D = 4 de Sitter

Zilhão et al. '12

- Two parameters: MH, d
- Initial data: McVittie type binaries McVittie '33
- "Small BHs": $d < d_{crit} \Rightarrow$ merger

 $d > d_{crit} \Rightarrow$ no common AH

• "Large" holes at small d: Cosmic Censorship holds

Conclusions

U. Sperhake (DAMTP, University of Cambr Black-hole simulations on supercomputers

07/11/2012 49 / 50

・ロト ・ 同 ト ・ ヨ ト ・ ヨ ト … ヨ

Conclusions

NR breakthroughs

Pretorius '05, Brownsville, Goddard '05

- GW Template construction \rightarrow Cover parameter space
- BH kicks $\rightarrow m1/m2$ dependence of superkicks
- High-energy collisions \rightarrow Extension to $D \ge 5$
- AdS/CFT → Generic NR framework, What studies?
- Fundamental properties \rightarrow Cosmic censorship, BH Stability

BH have applications in many areas!
