U. Sperhake (DAMTP, University of Cambridge) The iterated Prisoner's dilemma

22/03/2013 1 / 9

### The prisoner's dilemma

- Ernie & Bert have comitted a crime
- They are caught, sparse evidence
- They are separately interrogated
- Either confess or deny
- 4 possible outcomes
  - Both confess (defect!) ⇒ Both get punished
  - Both deny (cooperate!) ⇒ Both get light punishment (evidence!)
  - Ernie denies, Bert confesses  $\Rightarrow$  Ernie free, Bert punished hard
  - Vice versa

< □ > < □ > < □ > < □ >

# The prisoner's dilemma payoff matrix

Ernie Bert	Cooperate		Defect	
Cooperate	Reward	Reward	S payoff	T payoff
Defect	T payoff	S payoff	Penalty	Penalty

- *T* = Tempation payoff
- **R** = Cooperation reward
- P = Punishment
- S = Sucker's payoff
- T > R > P > S
- Optimal strategy: defect!
- Problem: No communication...

3

< ロ > < 同 > < 回 > < 回 >

## The iterated prisoner's dilemma (IPD)

- Play an unknown number of rounds; accumulate reward "points"
- A strategy can choose based on past moves of either player
- Example strategies:
  - Saint: Always cooperate
  - Defector: Always defect
  - Random: 50/50 random choice
  - Grim Trigger: Cooperate until oponent defects; from then on defect always
  - Tit for Tat: Cooperate in the first round; then always do what the opponent did in the previous round
  - Tit for Two Tats: As TFT, but allow two defections

U. Sperhake (DAMTP, University of Cambridge) The iterated Prisoner's dilemma

- R. Axelrod, late 1970s
  - Invited game theorists to submit strategies
  - Most were more complicated...

And the winner is:

< ロ> < 回> < 回> < 回> < 三</li>

- R. Axelrod, late 1970s
  - Invited game theorists to submit strategies
  - Most were more complicated...

And the winner is: Tit for Tat;

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

  - Most were more complicated...

And the winner is: Tit for Tat; Tit for two Tats would have won...

Key attributes

- Nice: Do not start defecting
- Retaliating: Don't be a sucker
- Forgiving: Return to cooperation if appropriate
- Non-envious: Don't try to outscore your opponent

< ロ > < 同 > < 三 > < 三 >

#### Accidents happen...

- Random noise
  - $\Rightarrow$  occasionally invert player's decision
- Bad for TFT
  - $\Rightarrow$  Endless cycle of recrimination

Chinese Embassy, Belgrade

Favors more forgiving strategies: Tit for *N* Tats Note:  $[\lim_{N\to\infty} \text{Tit for } N \text{ Tats }] = \text{Saint}$

## Societal collapse and order

Nowak & Sigmund 1990s

- Population of strategies
- Reward: Offspring ⇒ adjust proportions

- Plenty of defection
- TFT eliminates defectors
- With few defectors, noise favors TFNT with increasing N
- These near Saints are vulnerable to exploitation by defectors...

< ロ > < 同 > < 回 > < 回 >

In the long run societies are often dominated by Pavlov

- Start by cooperating
- win-stay, loose-switch, i.e. Change choice if I get a "sucker's payoff" or "punishment"
- If by accident it gets away with exploitation, it does so!
- What makes Pavlov strong?
  - It does not police as well as TFT
  - But, as TFNT get soft, Pavlov ruthlessly exploits near Saints
  - Yet, Pavlov is perfectly cooperative with copies of itself

- Altruism is NOT the opposite of selfishness
- Communication vital for establishing cooperation
- In the IPD, stay nice, simple, retaliating and yet forgiving
- Noise complicates life!
- Defectors are bad and so are Saints
- TFT needed for policing, Pavlov needed to weed out Saints
